3rd AIAA CFD Drag Prediction Workshop
San Francisco, California
June 3-4, 2006

DPW-W1/W2 Wing-Alone *Outline*

- Flow Solver / Computing Platform
 - Grid Information
 - Case 2: *DPW-W1 and DPW-W2 Wing-Alone*
 - Convergence Histories and Residuals
 - Grid Sensitivity Study
 - Drag Polar
 - Streamlines / Pressures / Spanloads
 - Conclusions
-

DPW-W1/W2 Wing-Alone *Flow Solver / Computing Platform*

OVERFLOW MPI Version 2.0z

- Setup was consistent with DPW2
- Spalart-Allmaras turbulence model
- Roe upwind scheme
- Viscous terms computed in all three directions (full N-S)

Parallel Processing Done on a PC Cluster

- Linux operating system
 - 906 Opteron dual CPU nodes with 4 GB of memory each
 - Wing-alone medium grid run on 4 processors (2 nodes)
 - 5 hours per 1000 fine grid iterations
 - Full convergence reached after 3600 fine grid iterations
 - Roughly 18 hours of wall clock time needed per case for the medium grid
-

DPW-W1/W2 Wing-Along *Grid Information*

- The W1 and W2 grid systems consisted of 5 zones.
- The medium grid is typical for drag-quality design studies.

W1/W2

Grid	Points	1 st Cell Size	y^+	Constant Cells	Growth Rate
Coarse	1,442,285	.00055 mm	.90	2	1.29
Medium	4,856,149	.00038 mm	.62	3	1.19
Fine	16,265,909	.00025 mm	.41	4	1.12
Extra Fine	55,014,321	.00016 mm	.19	6	1.08

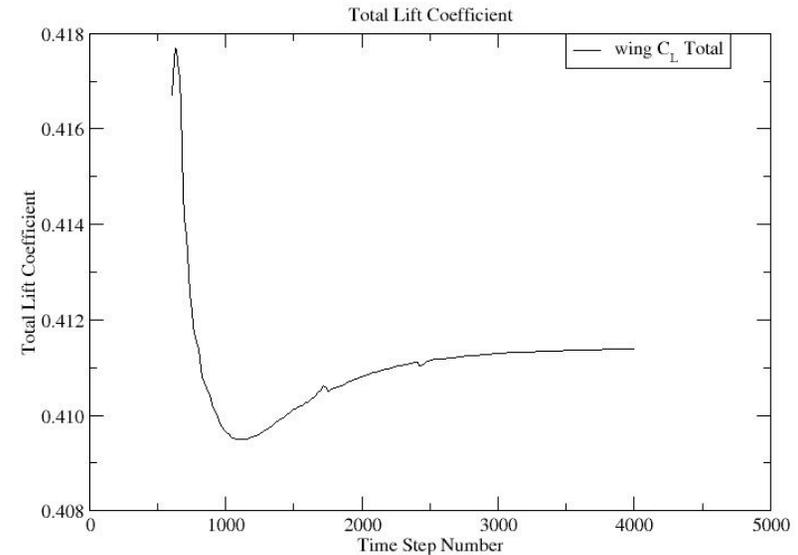

DPW-W1/W2 Wing-Alone Convergence Histories

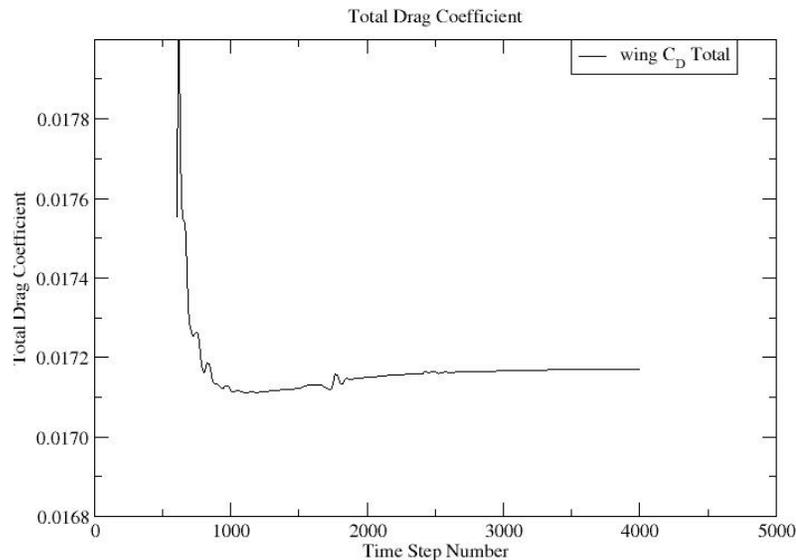

- W1 geometry
- Fully turbulent
- Reynolds Number = 5 million
- Mach = 0.76
- $\alpha = 0.5^\circ$
- Medium grid
- These flat-line convergence histories are representative of the coarse/fine grid as well as W2 solutions at the above condition.

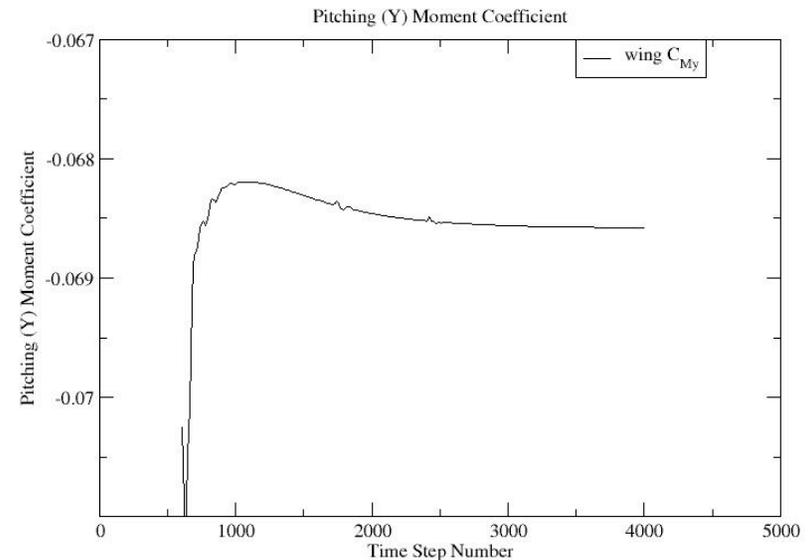

Force/Moment History

Force/Moment History

Force/Moment History

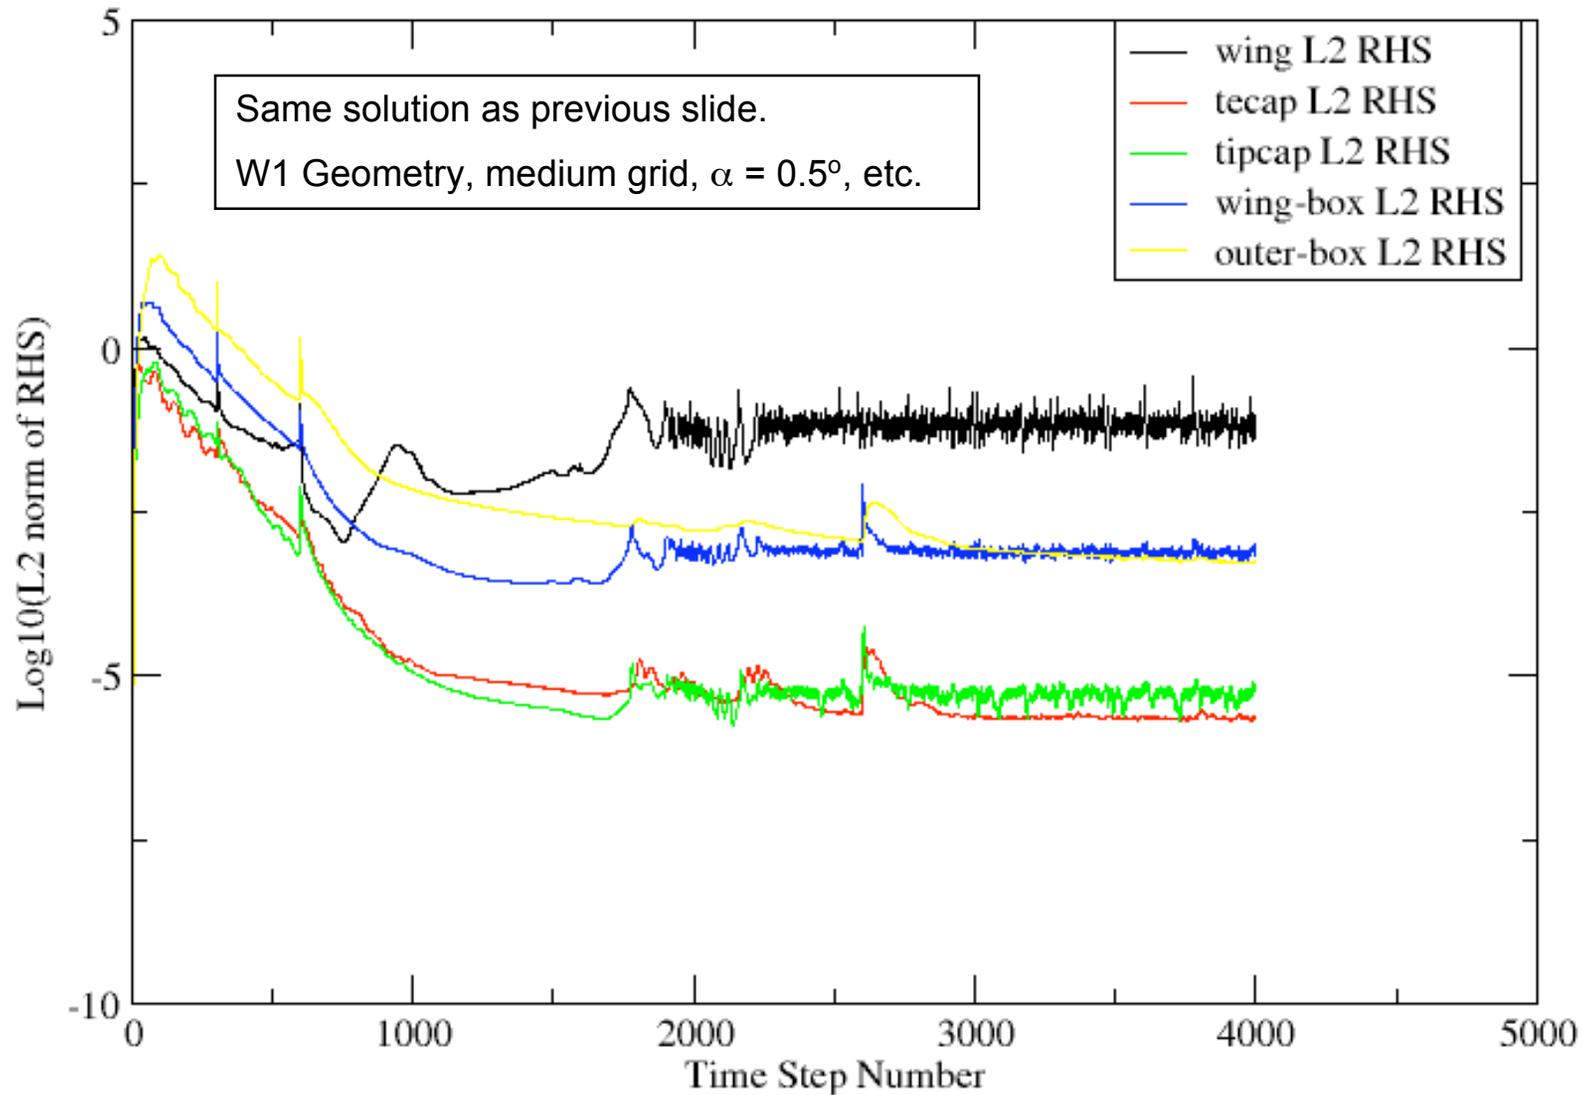

DPW-W1/W2 Wing-Alone Residuals

Residual History

Log10(L2 norm of RHS)

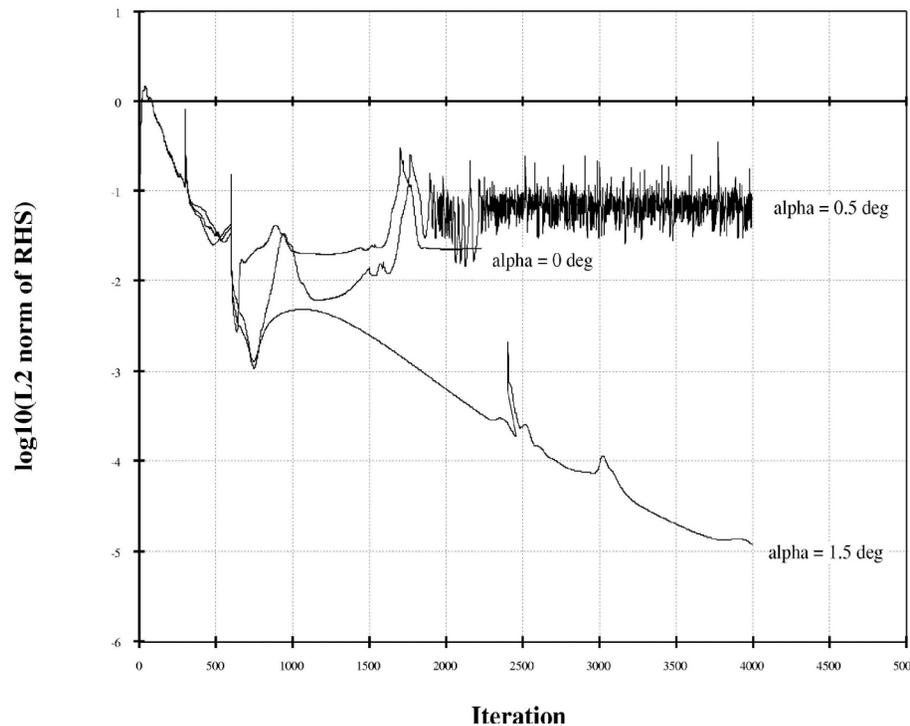

DPW-W1/W2 Wing-Alone Residuals (cont.)

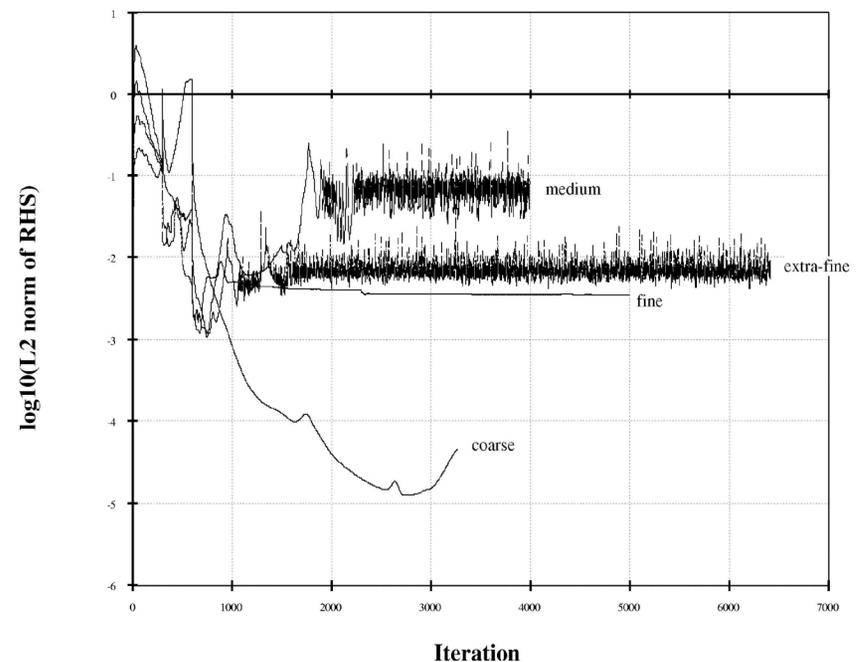

W1 Medium Grid
Mach = 0.76, Fully Turbulent

- All residuals are for the wing grid.
- More time is needed to understand why residual level and behavior changes with alpha and grid refinement.
- W1 and W2 have similar residuals.
 - Increments are good.

W1 alpha = 0.5 deg
Mach = 0.76, Fully Turbulent

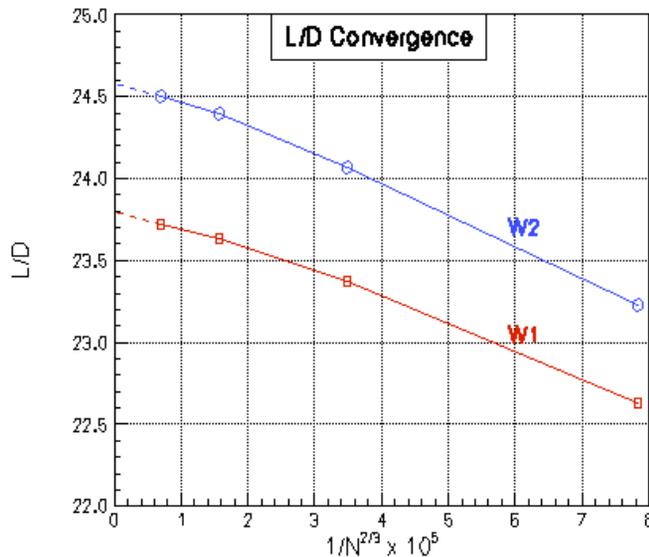

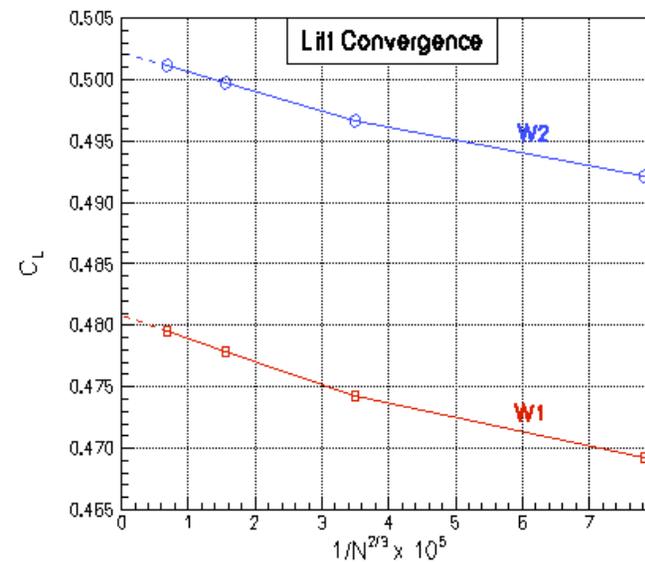

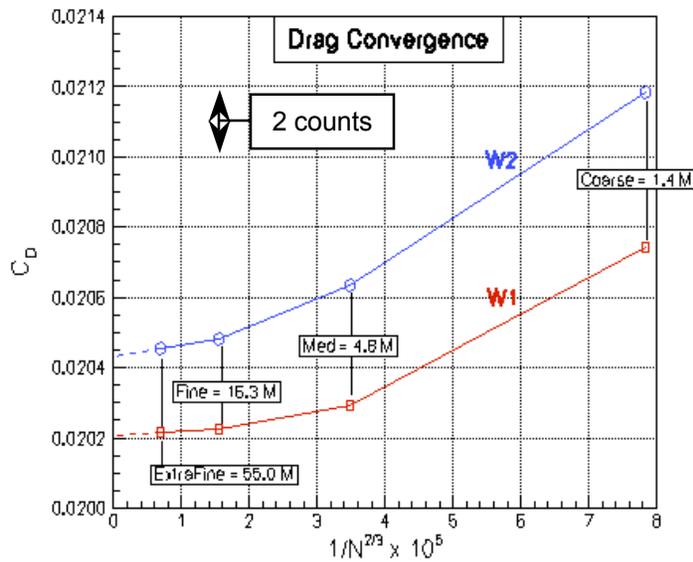

DPW-W1/W2 Wing-Alone Grid Sensitivity Study

Wing-Alone OVERFLOW Results

Mach = 0.76, $R_N = 5.0$ million, Fully Turbulent

- Dashed lines are linear extrapolation of fine and extra-fine data.
- Drag data for the medium grid are close to the asymptotic range of convergence.
- Lift data for the medium grid are in the asymptotic range.
- L/D comparison shows W2 improvement

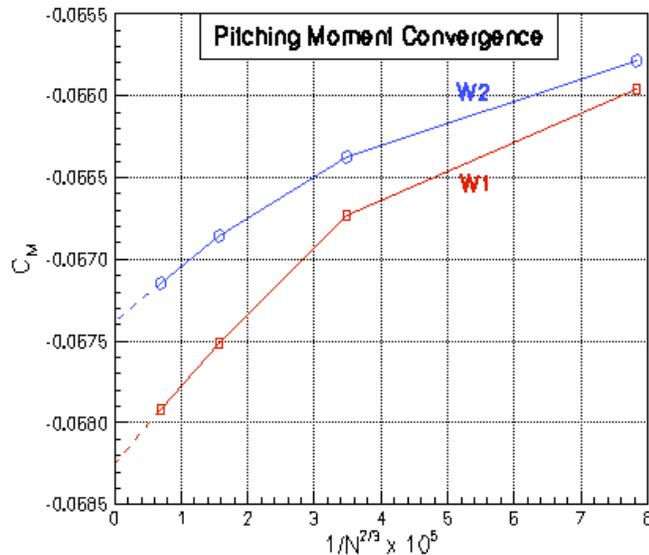

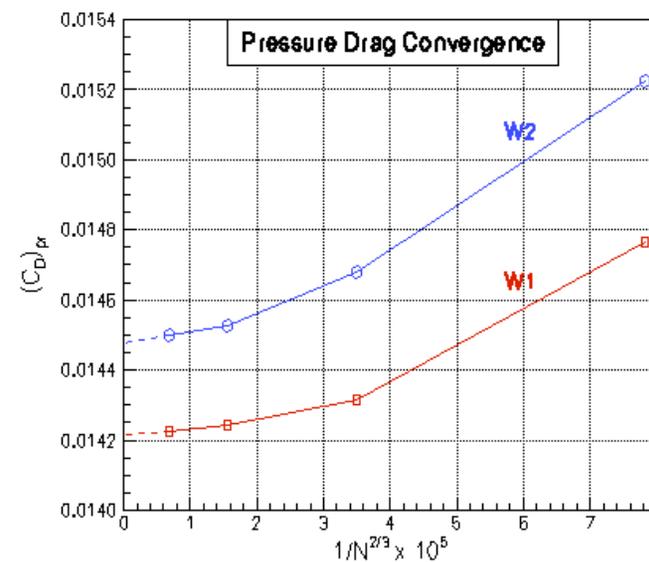

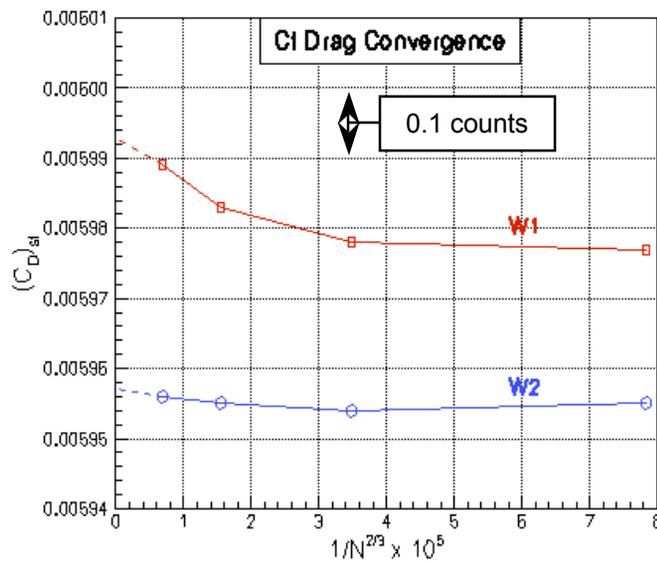

DPW-W1/W2 Wing-Alone Grid Sensitivity Study (cont.)

Wing-Alone OVERFLOW Results

Mach = 0.76, $R_N = 5.0$ million, Fully Turbulent

- Dashed lines are linear extrapolation of fine and extra-fine data.
- It's important to note the scale of the plots. C_f is plotted on a very small scale.

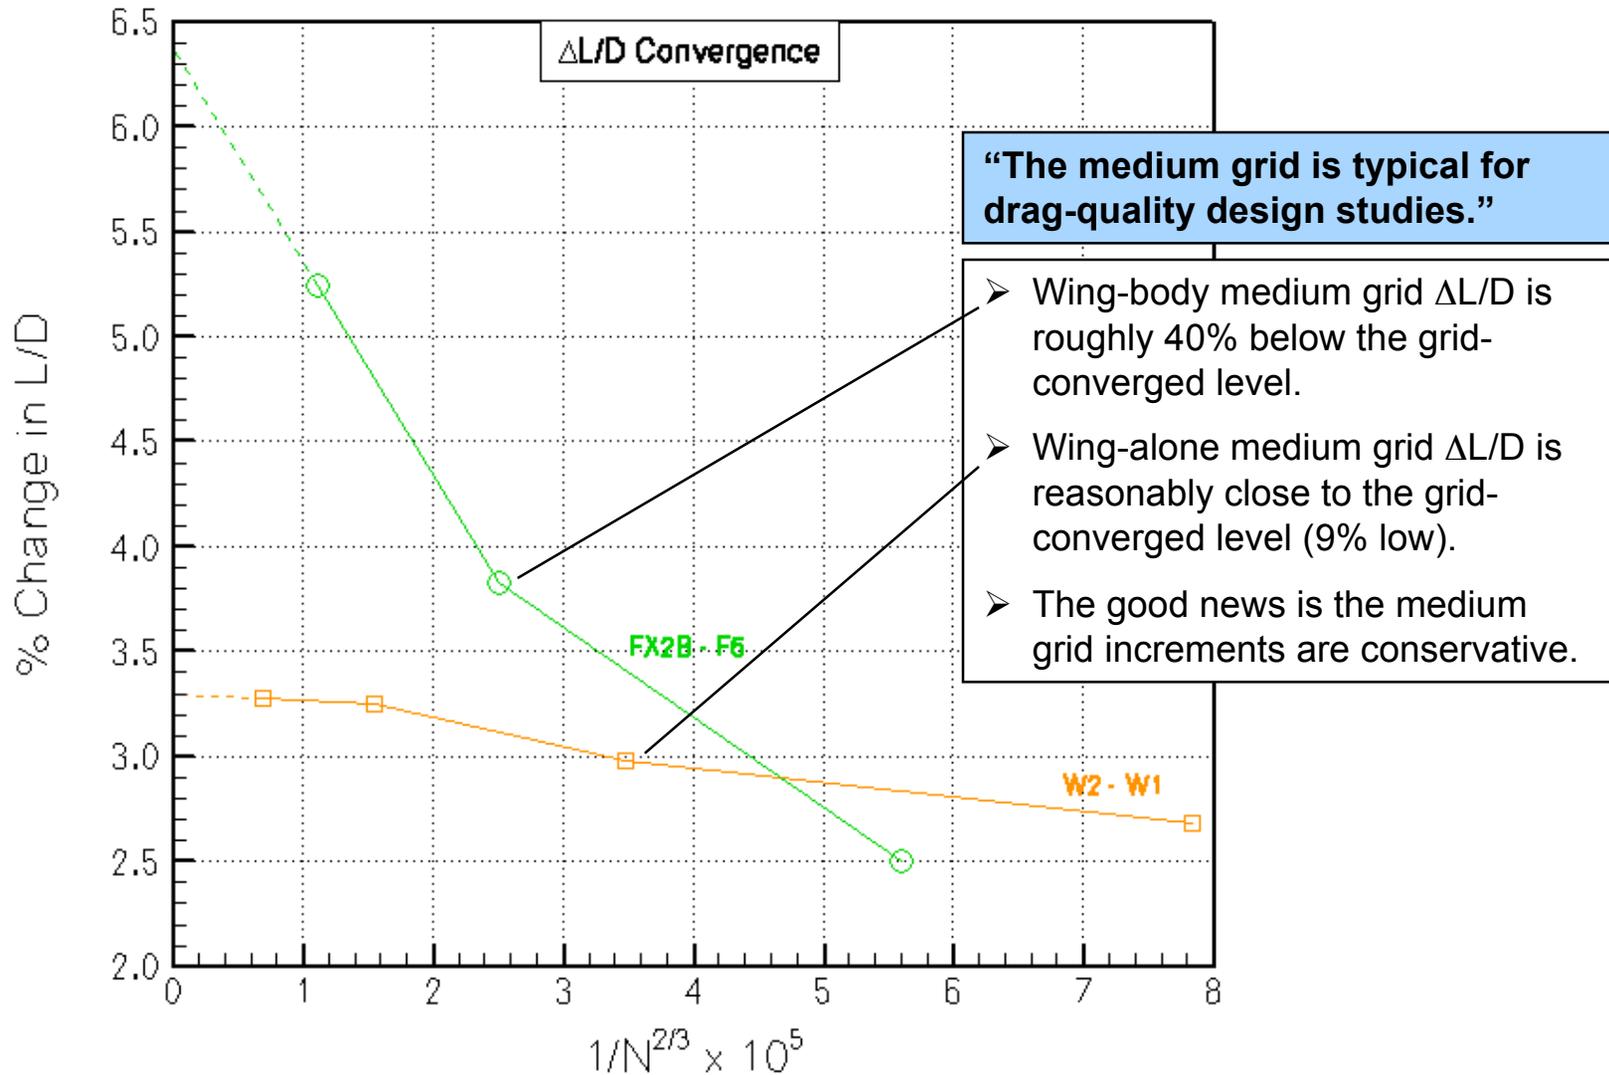

Wing-Body vs Wing-Alone $\Delta L/D$ Convergence Comparison

Wing-Body vs Wing-Alone OVERFLOW Results

$R_N = 5.0$ million, Fully Turbulent

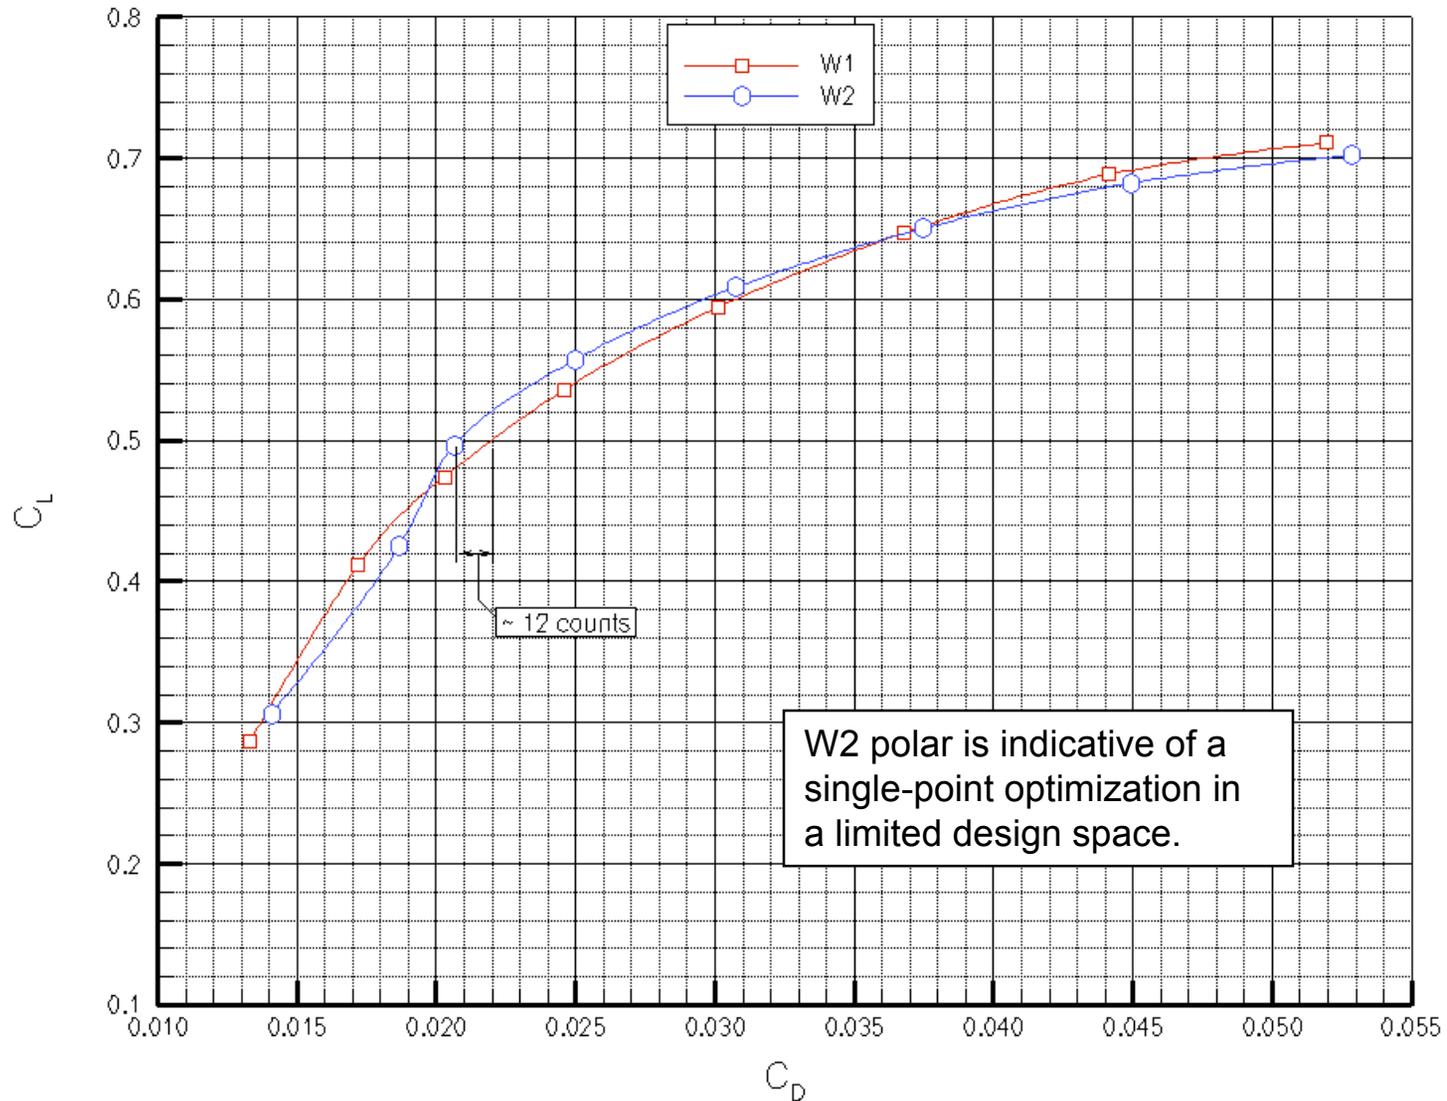

DPW-W1/W2 Wing-Alone Drag Polar

DPW-W1/W2 Wing-Alone OVERFLOW Results

Mach = 0.76, $R_N = 5.0$ million, Fully Turbulent, Medium Grid

DPW-W1/W2 Wing-Alone Wing Pressure Comparison

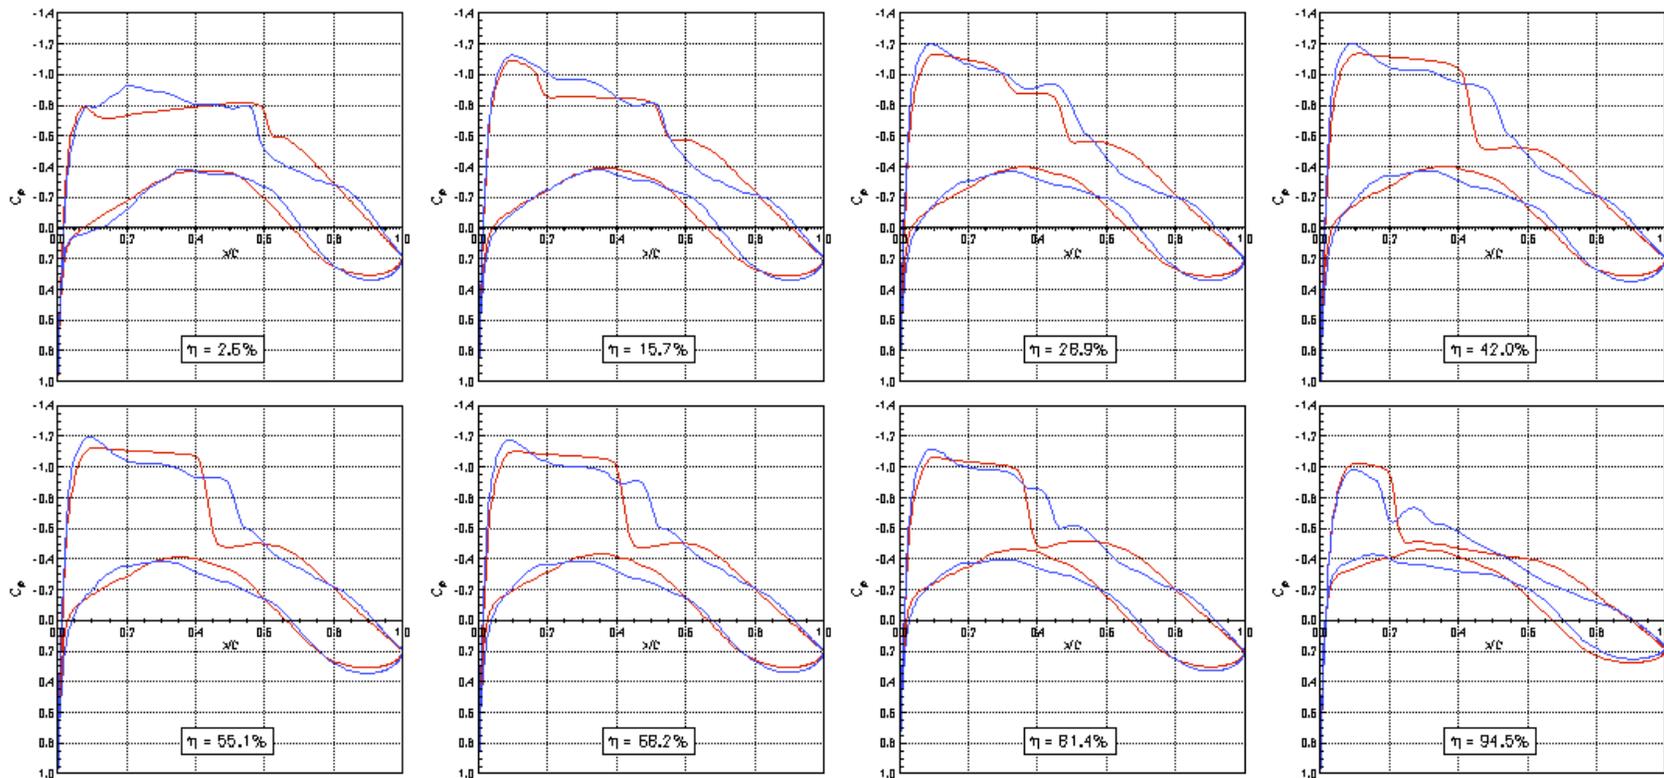

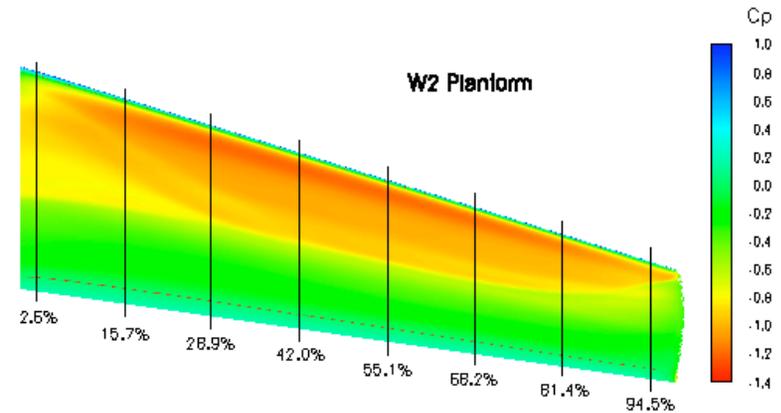

DPW-W1/W2 Wing-Alone Pressure Comparison
Fine Grid Fully Turbulent OVERFLOW Solutions

Mach = 0.76, $R_N = 5.0$ million, $\alpha = 0.5^\circ$

— W1, OVERFLOW, Fine Grid, SA-Upwind
 $C_L = .4779$, $C_D = .020225$, $C_M = -.06751$

— W2, OVERFLOW, Fine Grid, SA-Upwind
 $C_L = .4997$, $C_D = .020482$, $C_M = -.06686$

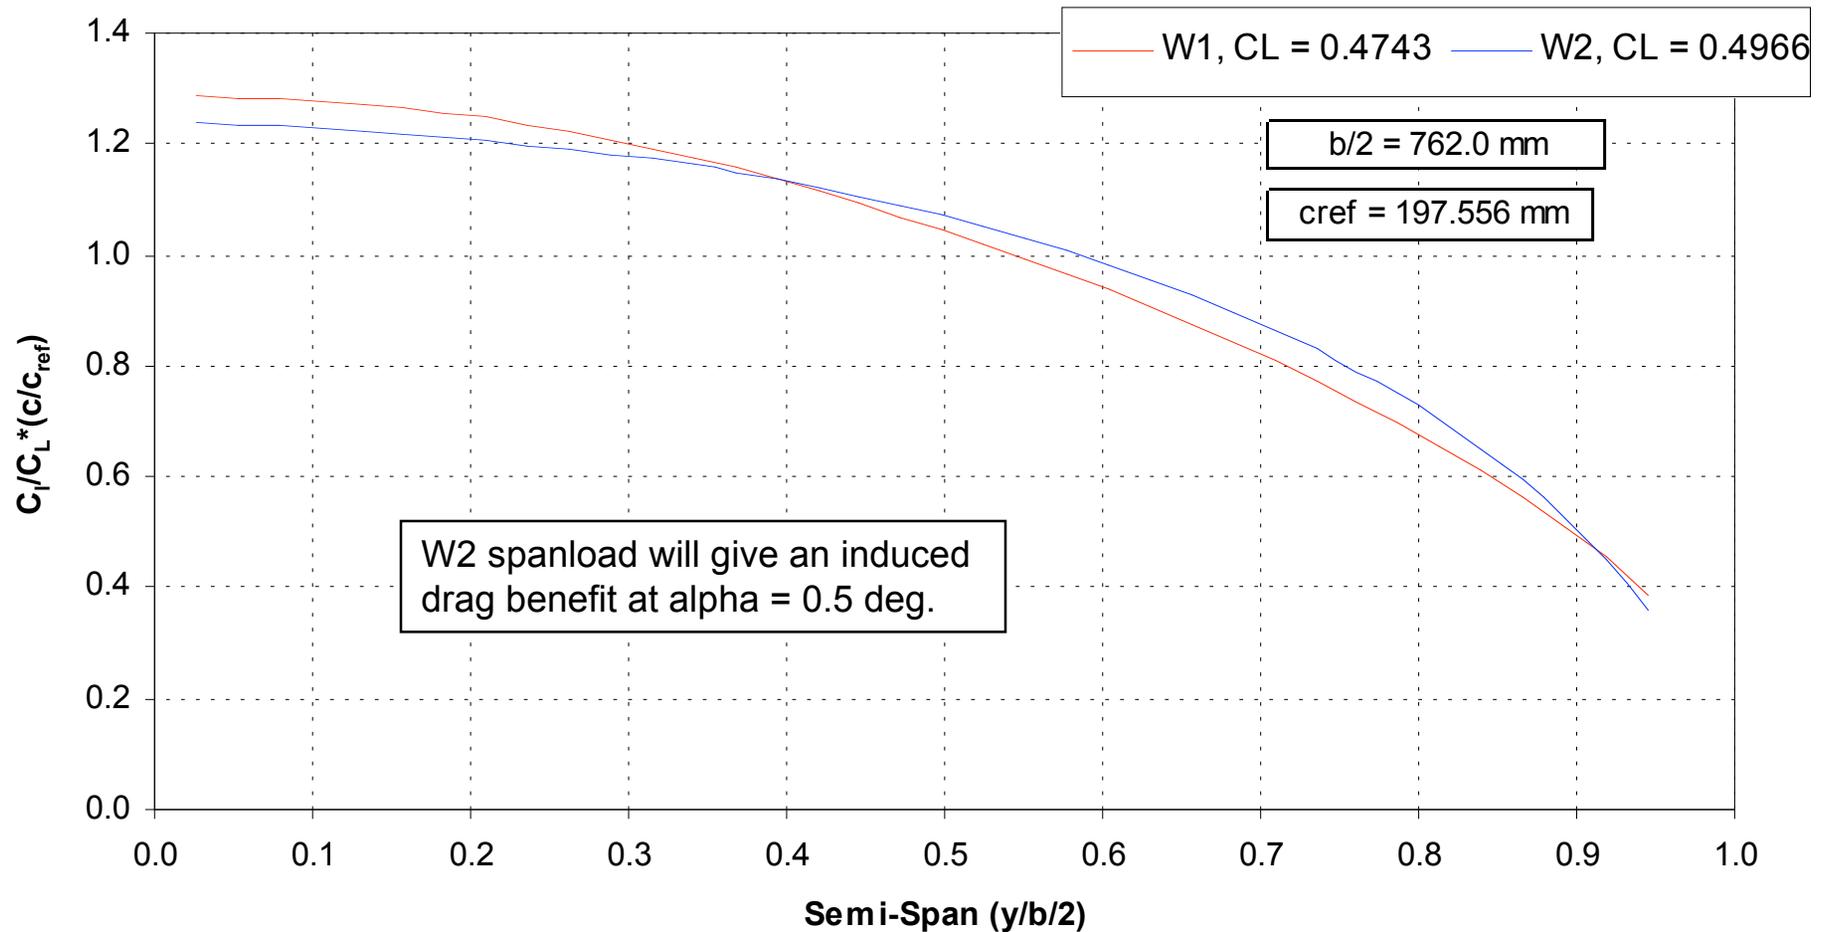

DPW-W1/W2 Wing-Alone Spanload Comparison

Wing-Alone Spanload Comparison

Mach = 0.76, $\alpha = 0.5$ deg, $R_N = 5$ million, Fully Turbulent, Medium Grid

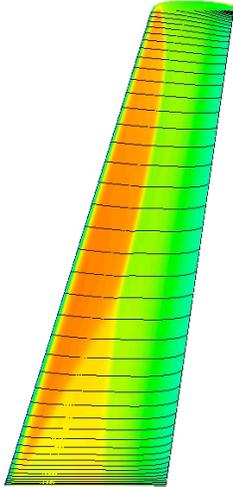

DPW-W1/W2 Wing-Alone Surface Streamlines

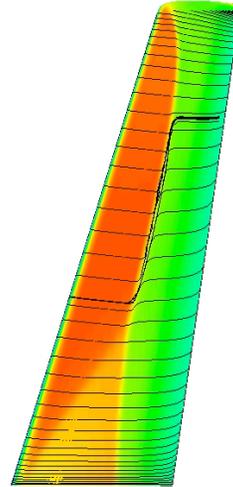

DPW-W1 Wing
OVERFLOW 2.0, SA, UPW, Medium Grid
M=0.76, Alpha=0.5, CL=0.47428, CD=0.020293

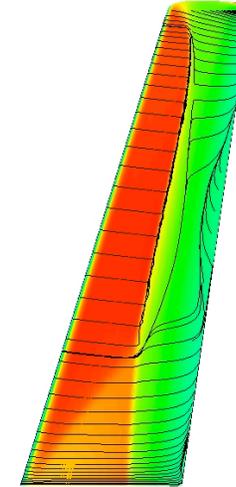

$\alpha = 0.5^\circ$

DPW-W1 Wing
OVERFLOW 2.0, SA, UPW, Medium Grid
M=0.76, Alpha=1.5, CL=0.59438, CD=0.030138

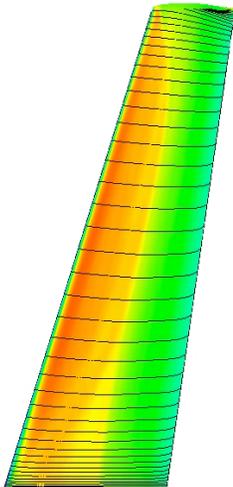

$\alpha = 1.5^\circ$

DPW-W1 Wing
OVERFLOW 2.0, SA, UPW, Medium Grid
M=0.76, Alpha=2.5, CL=0.68833, CD=0.044133

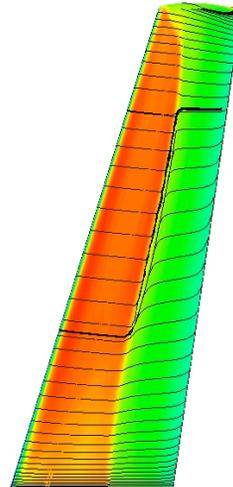

$\alpha = 2.5^\circ$

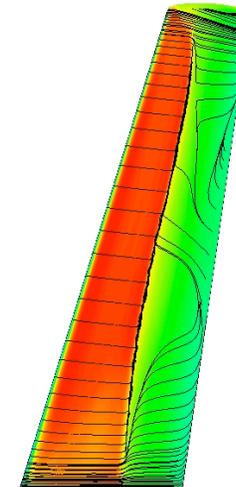

DPW-W2 Wing
OVERFLOW 2.0, SA, UPW, Medium Grid
M=0.76, Alpha=0.5, CL=0.49659, CD=0.020629

DPW-W2 Wing
OVERFLOW 2.0, SA, UPW, Medium Grid
M=0.76, Alpha=1.5, CL=0.60828, CD=0.030732

DPW-W2 Wing
OVERFLOW 2.0, SA, UPW, Medium Grid
M=0.76, Alpha=2.5, CL=0.68232, CD=0.044952

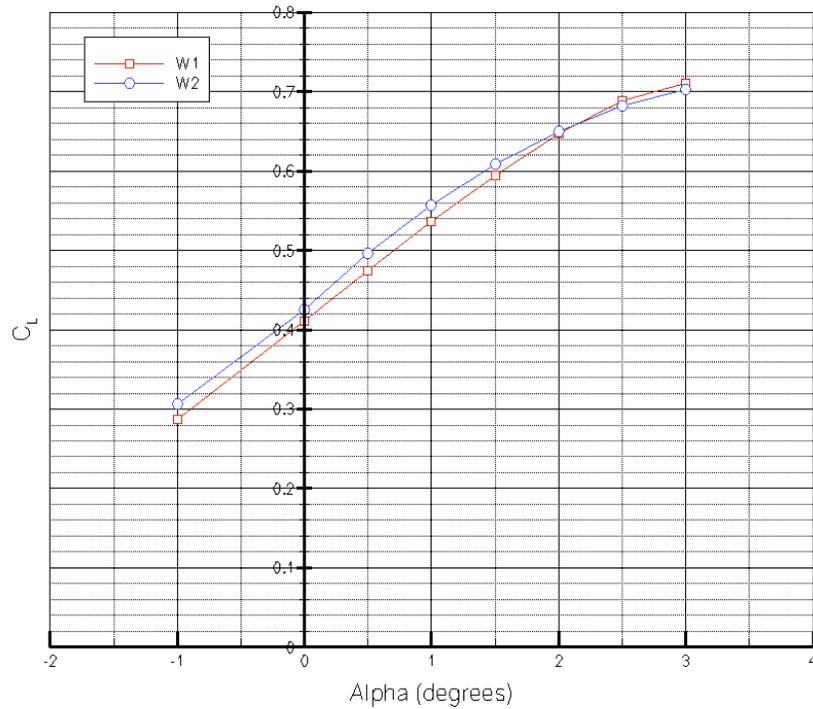

DPW-W1/W2 Wing-Alone C_L and C_M Curves

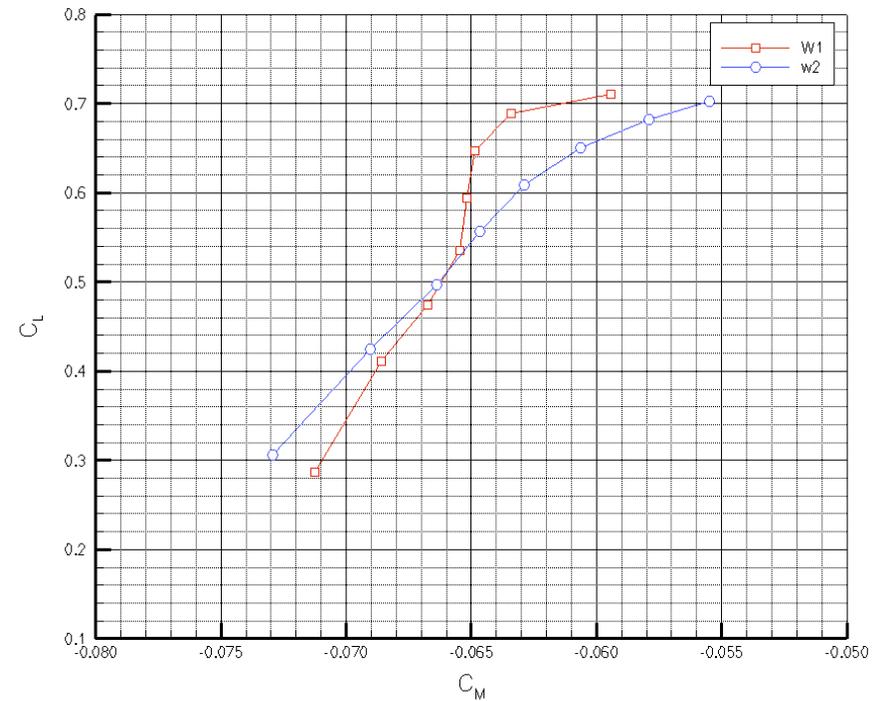

DPW-W1/W2 Wing-Alone OVERFLOW Results

Mach = 0.76, $R_N = 5.0$ million, Fully Turbulent, Medium Grid

DPW-W1/W2 Wing-Alone OVERFLOW Results

Mach = 0.76, $R_N = 5.0$ million, Fully Turbulent, Medium Grid

DPW-W1/W2 Wing-Alone Conclusions

Convergence Histories

- No CL or CD fluctuation
 - Lift varied by less than 0.00001 over last 100 iterations
 - Drag varied by less than 0.000001 over last 100 iterations
- Variation of residual with alpha and grid size not understood at time of workshop.
 - Wing grid residual drops one order for medium grid at 0.5°
 - Both W1 and W2 solutions had similar residuals

Grid Convergence Study

- Results of the wing-alone grid sensitivity study look reasonable.
 - The extra-fine grid solutions helped establish the asymptotic range of grid convergence.
 - Grid convergence on $\Delta(L/D)$ between the wing-body and wing-alone configurations looks very different.
 - Wing-body separation suspected to be the problem.
 - Difficult (if not impossible) to get accurate incremental drag using solutions where separated flow is present.
-
